The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORFI. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haemophilus somnus; immunogenic; haemolysin; Lpp

CC LKT352 is 98% homologous with authentic leukotoxin and migrates contained the LKT352 gene was prepd. as follows: lktA, an Mael fragment conty. the gene was ligated into the Smal site of pUCl3 to form constructs were made in the ptac-based vector, pcH432:lacl digasted with Smal. One, pAA342, consisted of the 5' Ahalil fragment from lktA while the other, pAA345, contained content from lktA while the other, pAA345, contained leukotoxin peptide at high levels while pAA345 expressed full cluctoxin peptide at high levels while pAA345 expressed full cong pield pAA345 was therefore ligated to Styl/BamHI digested pAA342 to yield pAA352 conty. the LKT352 sequence. The protein expressed content peptide antigens, e.g. fimbrial protein, plasmin receptor or 50K outer membrane protein. The vaccines can be used to protect cattle from respiratory diseases such as pneumonia, esp. Sequence 926 AA;

Sequence 926 AA;

Vector; LKT 352; flanking; recombinant; antigen; somatostatin;
gonadotropin releasing hormone; rotavirus viral protein 4;
carrier protein; lactation; reproduction.
          Gene libraries of P. haemolytica Al (strain B122) were constructed in lambda gtll and pUCl3. Resulting clones were used to transform E. coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P. haemolytica to increase anti-leukotoxin antibody levels. Positive colonies were screened for their ability to produce leukotoxin by incubating cell lysates with bovine neutrophils and measuring the release of lactate dehydrogenase from the neutrophils. A 4kb fragment was obtd. Progressively larger clones were isolated by the produce were isolated by
                                                                                                                                                                                                      Immunological carrier system with enhanced immunogenicity comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or gonadotropin releasing hormone
                                                                                                                                                                                                                                                                                              WPI;

The clone was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing the full length leukotoxin at low levels. The 3' end of the lkth gene from the full length clone was ligated to the truncated gene clone to yield plasmid pha352. The didner was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotavirus viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger immune response than the antigen alone. Immunisation with these antigens can regulate growth rate, lactation and reproductive efficiency. See also AAR34546-8.                                                                                                                           Haemophilus somnus enriched with iron regulated proteins is new. The vaccine pref. further comprises an immunogenic leukotoxin polypeptide, esp. an immunogenic Pasteurella haemolytica leukotoxin homologous to LKT352. Example 1.2 describes the prodn. of P. haemolytica recombinant leukotoxin from pAA352.

Two expression constructs were made. One, pAA342, contained the 5'-Ahall fragment of the 1tkA gene, while the other, pAA345, contained the entire 1ktA gene. pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the 1ktA gene was ligated into pAA342, yielding plasmid pAA352. Or new leukotoxin is 98% homologous to authentic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gonadotropin releasing horn
multimer; vaccine; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chimeric protein of leukotoxin and gonadotropin releasing hormone useful for, e.g. preparation of vaccines for reduction of incidence of mammary tumours in mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a recombinantly produced or chemically synthesised leukotoxin 352 (LKT 352)polypeptide, derived from the lktA gene that is present in the plasmid pAA352. This gene produces a truncated protein that has an estimated molecular weight of about 99 kDa and lacks the cytotoxic portion of the molecule. Thus this gene has a higher expression level than that of the full-length molecule. This can be used in the construction of a chimeric protein that comprises a leukotoxin polypeptide, several multimers, and a GnRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

It is the product of a chimeric gene (AAT37176) produced by ligating a synthetic sequence for the 4-copy GnRH into vector pAA52 (ATCC 68283), which carries the LKT-52 gene. Recombinant plasmid pCB113 (LKT 352:4 copy GnRH, ATCC 69749) was obtd. Escherichia coli transformants produced the chimeric protein, which is useful as a vaccine for fertility control, esp. immunological sterilisation of domestic or farm animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gonadotropin-releasing hormone multimer fusion proteins - we leukotoxin polypeptide for increased immunogenicity, useful antifertility vaccine prodn.

The present sequence represents the LKT-GnRH chimeric protein from pCB113. This plasmid contains the LKT-352 polypeptide (AAM79568) fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnR sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.

a GnRH

Chimeric protein of leukotoxin and gonadotropin releasing useful for, e.g. preparation of vaccines for reduction of of mammary tumours in mammals  ${\bf r}$ 

hormone incidence

neurofilament triplet M protein - pig (fragments)
N;Alternate names: 160K neurofilament protein; NF-M(medium) protein; type IV IF
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 31-Mar-1988 #sequence_revision 02-Jul-1998 #text_change 10-Jul-1998
C;Accession: A05075; S02570
R;Geisler, N.; Fischer, S.; Vandekerckhove, J.; Plessmann, U.; Weber, K.
EMBO J. 3, 2701-2706, 1984
A;Title: Hybrid character of a large neurofilament protein (NF-M): intermediate
A;Reference number: A05075; MUID:85076594
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C;Species: Bacillus subtilis
